

# Supporting research and education for sustainable development of tropical animal production

The poultry, pig, fish and camel subsectors, alongside those of cattle and small ruminants, play a major role in poor and emerging countries.

The international livestock research community is highly committed to encouraging and developing the exchange, production and dissemination of both scientific and technological information.

CIRAD promotes collaborative networks on tropical animal sciences, in particular through four emblematic internet portals: **FLUTrop**, **PIGTrop**, **AQUATrop** and **Camélidés**.

## CIRAD tropical animal science websites

**FLUTrop**

<http://avian-influenza.cirad.fr>

Research and surveillance in domestic and wild birds

**AQUATrop**

<http://aquatrop.cirad.fr>

Fish production, biology & genetics

**PIGTrop**

<http://pigtrop.cirad.fr>

International network for sustainable pig production in the tropics

**Camélidés**

<http://camelides.cirad.fr>

Camel biology and production

# Animal health, livestock and aquaculture in the tropics

Four websites dedicated to sustainable development and research

## [Keywords]

Health, production, economy, rural development, commodity chains, food safety, biodiversity, environment, ecology, education

# Promoting information sharing in partnership with international collaborative networks

**Presenting results** and field experiences in terms of R&D.

**Offering free and up-to-date resources:** on-line documents, open archives, scientific publications, oral communications, RSS feeds, newsletters, forums, collaborative portals, press reviews, databases and integrated geographical information systems, contacts.

**Events calendar:** seminars, training workshops, project meetings.

**Alert system:** rapid alerts and hot news, new releases, job offers.
