

# GRET technical sheets

GRET technical sheets  
For pig breeding in Vietnam

These technical sheets have been achieved by GRET within the framework of the Red River Programme in Northern Vietnam. They address vietnamese farmers and are available in French and Vietnamese version.

These documents address the Vietnamese farmers from the Red River Delta and from the northern mid-land areas. They have been achieved within the framework of the Red River Programme, gathering GRET and the Vietnam Agricultural Science Institute, and, more specifically, during the PAOPA project (french acronym for Agricultural Production Organisation Support Project) on which GRET, Vétérinaires Sans Frontières and VASI have collaborated.

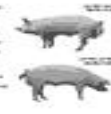

French and Vietnamese versions are now available for download.
